AI Code Assistant Scorecard Template

Criterion	Weight (1–5)	Copilot	Amazon Q	Cursor	Tabnine	Replit	Alt 1	Alt 2
Security / Privacy	(e.g., 5)							
Details: Does it meet our non-negotiables? What are the data handling policies? Is there an on-prem option? Compliance certifications?								
Agentic Power	(e.g., 4)							
Details: How much can it do beyond simple completions? Can it refactor? Generate tests? Fix bugs across multiple files?								
IDE Fit	(e.g., 3)							
Details: Does it integrate seamlessly with our primary IDEs (VS Code, IntelliJ, Vim)? Is the plugin stable? Are there disruptive pop-ups?								
Cost	(e.g., 2)							
Details: Per-user subscription? Token-based? Free tier for individuals? Enterprise pricing tiers? Hidden costs?								
Customization / Contextual Learning	(e.g., 4)							
Details: Can it learn from our private codebase? Can we fine-tune it on our internal libraries or coding standards?								
Accuracy & Relevance	(e.g., 5)							
Details: How often are suggestions actually useful? Does it hallucinate? How quickly does it adapt to context?								
Ease of Use / Learning Curve	(e.g., 3)							
Details: How intuitive is the UI? How much training is required for developers to get productive with it?								
Community / Support	(e.g., 2)							
Details: Is there a strong community? Good documentation? Responsive support channels?								
Total = Σ(weight × score)
